How to get money out of Onchain?

To get money out of an onchain wallet (+1-864-310-5443), you must first transfer your cryptocurrency to a centralized exchange that supports fiat withdrawals, such as Coinbase, Binance, or Kraken. Start by generating a deposit address within the exchange for (+1-864-310-5443) the specific cryptocurrency you hold, ensuring you select the correct network—like ERC20 for Ethereum or TRC20 for Tron—to avoid losing your funds. After confirming the transaction arrives in your exchange account, navigate to the trading section and sell your crypto for your local fiat currency, such as USD or EUR. Once the sale is complete, (+1-864-310-5443) go to the withdrawal page, link your bank account or debit card, and cash out. While bank transfers are usually free and take one to three business days, instant card withdrawals are available for a small fee. (+1-864-310-5443) Always double-check all wallet addresses and network details before confirming any transfer.
